

Laboratory Services

Pilot Plant

- **Collaborative Facility Access & Expert Rental**

Flexible “hotel-style” R&D access to specialized pilot equipment and on-site technical staff, expanding your capabilities without capital investment.

- **Hands-On Process Development**

Your team develops processes on-site in our pilot plant, leveraging our infrastructure and expertise to iterate faster while maintaining full creative and scientific control.

- **Rapid Feasibility & Prototyping**

Quick-turnaround pilot-scale trials to confirm technical feasibility, generate decision-enabling data, and de-risk commercial scale-up.

- **Continuous Manufacturing Excellence**

Dedicated support to convert batch processes into continuous operations, improving efficiency, consistency, and scalability.

- **Bioavailability Enhancement (ASDs)**

Amorphous solid dispersion development via hot-melt extrusion and spray drying to overcome solubility limits and increase bio-availability and exposure.

- **Dosage Form Diversity**

Formulation development across oral, parenteral, inhalation, and mucosal delivery routes to match your target product profile.

- **R&D Material Supply**

High-quality non-GMP batches to support formulation and process feasibility work, as well as preclinical stability and compatibility studies.

- **High-Containment Capabilities**

Secure handling and development of highly potent compounds up to OEB4 and controlled/addictive substances within specialized containment infrastructure.
